RE: Closure Report

Burnett Oil Co., Inc. - Gissler B 5 Tank Battery

UL/O sec. 8 T17S R30E

Mr. Bratcher

The above location is located approximately 1 miles north of Loco Hills, New Mexico at UL/O sec. 8 T17S R30E. The site is located in an area of no known groundwater.

On March 6, 2016 a release was discovered of 60 barrels of crude oil. The release occurred when the check valve on the drain line failed. The release impacted a 205'x1' area in a pipeline ROW with a 10'x 30' pooling area in a pipeline ROW. There was also an impacted area of 60'x10' area on the facility location. The BLM and the NMOCD were both notified of the release on March 7, 2016 with the initial C-141 being filed on the same day.

Corrective Action Plan

To remediate the impacted soil, Burnett Oil Co., Inc. would like to work the impacted area with chloride bonding agents, flush the area with fresh water and drive the chlorides approximately 3' below surface level. After each installment of binding agents, Burnett Oil Co., Inc. will collect samples for verification of remediation success.

The impacted area was bio-remediated once a week for four weeks, starting on July 7, 2016. Samples of the impacted area were collected and sent to the lab for analysis. After reviewing the analysis, we continued with the bio-remediation process in the areas of SP-2 and SP-5. The remediation process continued for an additional eight weeks. Samples were collected in the areas of SP-2 and SP-5 and were sent to the lab for analysis. The TPH levels have been successfully remediated below regulatory standards.

December 7, 2016

At this time, Burnett Oil Co., Inc. requests the closure of the Gissler B 5 Tank Battery Location.

Please feel free to contact me with any questions concerning this remediation plan request.

Sincerely,

Johnny Titsworth

HSE Coordinator
