RE: **2RP-3960 & 3961**

Bruce,

It was not my intention to have you delineate chlorides, just a spot check since the proposal is in-situ remediation. I do understand your concern, as one may lead to another. At this time, lets move forward on the project and just get a good delineation on the hydrocarbon, to include at least one more sample point in the battery. If the project warrants, OCD may ask for the chloride check at a future time. I will reconsider the remediation proposal after review of the delineation results.

If you have any questions or concerns, please contact me.

Thanks,

Mike Bratcher

Mr. Bratcher,

Apache will delineate in regards to hydrocarbons but chloride delineation should not be required due to the release was only associated with oil. Please let me know if you have any questions or wish to discuss. Thanks and have a good day.

Bruce/Kim,

NMSLO agrees with NMOCD on further site delineation before the work plan can be approved.

Also, upon new submittal, please expand the re-vegetation portion of the current work plan. BLM #2 will only be accepted if it is the LPC mixture. The sandy site mix contains lovegrass, which is not acceptable on state land at this time. There will also need to be something in the re-veg plan regarding noxious weeds.

Kim-please copy me on work plan submittals to NMOCD if they are regarding State Trust Land.

Thank you,

Amber Groves

RE: Apache Corp * Red Lake K St 1 * **2RP-3960 & 2RP-3961** * DOR: 10/10/16 & 10/4/15

The remediation proposal for the above referenced releases is **not** approved. OCD requests additional vertical delineation at both release areas, additional sample points in the battery, and testing for chloride content. Lateral definition will be required in the area outside the battery. The site diagram shows the battery sitting north/south. Battery at this site is east/west.

If you have any questions or concerns, please contact me.
