Subject: RE: Horse Creek Com #2 Work Plan 2RP-4071

RE: Vanguard Operating * Horse Creek Com 2 * 2RP-4071 * DOR: 12/20/16 (Discovery date)

Greetings,

In reviewing your proposal for remediation of the above referenced release, the following:

Your proposal is copied below. Based on photographs provided in the proposal document, it appears the impacted area has already been excavated to what appears to be approximately 4'-5' in depth.

- Was the excavated material hauled to a disposal?
- Is the proposed one foot horizontal and 3 feet vertical excavation in addition to what has already been excavated? What will be the disposition of any additional excavated material?
- I am unclear on where exactly the seven feet excavation w/liner will be relative to the well head.

Proposed Actions:

Based on field testing and laboratory analytical data, EPI proposes to excavate the sidewalls of the excavation one foot horizontally and approximately three feet bgs vertically. A 20-millimeter poly-ethylene liner will be installed in the deepest portion of the excavation, approximately seven feet bgs. The excavation will then be backfilled with clean soil.

Thanks in advance for clarification.
