Mr. Bratcher

Tomorrow, on my instructions, SW Royalties will begin to break up and till the hard soil that lies in the release footprint(s) north of the battery. This step is in preparation of implementing some pre-remediation sampling and to begin preparation of the site for a soil flushing remedy, similar to that approved by OCD at the Paloma release of Strata and many NSLU releases of Memorial.

On Thursday, we will grade-stake the site and collect samples in advance of the soil flushing remedy.

I will transmit to you the DRAFT remediation plan for the site this afternoon. If you have time on Thursday afternoon to come visit the site, we believe it may prove useful and we would appreciate your input. The remedy will not commence until OCD approves the plan.

We hope to begin the remedy prior to any monsoon season that Eddy County may get this year.

I will call you after I transmit the DRAFT later this morning.
