Hey Debi,

Question, what is your plan of action if chlorides are higher than 1,000 ppm greater than 4 ft? Otherwise, I do not have any issues with the proposed plan.

Please give me 3 days notice prior to sampling so that I may be onsite for visual confirmation. Thank you.

Mike and Henryetta,

Sport Environmental is submitting, on behalf of J. Cleo Thompson, the proposed remediation work plan, revised C-141, completed NMOCD Site Ranking Criteria Form, and other associated documents for your review. We request your review and a determination of your approval for the plan detailed below.

### **Revised C-141 and Associated Data Submittal**

On June 3, 2016, we submitted a C-141 on behalf of J. Cleo Thompson for a flowline release for the West Square Lake Unit 002 (Leonard "E") site. Well fluids from three facilities collect within the flowline that experienced a release. Ms. Henryetta Price, BLM, requested that we name the release after the facility in closest proximity to the release site. Attached please find the distance determination map which resulted in the site being renamed as West Square Lake Unit (WSLU) Tract 003 Well #9 flowline release on the updated C-141 (attached).

### **NMOCD Site Ranking Criteria Form and Acceptable Clean-up Limit(s) Determination**

In addition, I'd like to thank you for reviewing the specifics of this release with me last week. Attached please find the OCD Site Ranking Criteria Form with the calculated ranking score and acceptable concentrations highlighted (in blue). The ranking score calculated for the WSLU Tract 003 Well #9 release site was zero (0).

As discussed, the **Acceptable Clean-Up Criteria** for the site are:

<b>Constituent</b>	<b>Clean-Up Criteria Limit (ppm)</b>
Benzene	10
BTEX	50
TPH	5,000
Chlorides	1,000

### **Proposed Remediation Work Plan and Request for Approval**

Benzene, BTEX, TPH, and Chlorides will be addressed and composite samples collected to verify successful clean-up of the release site to the limits listed in the table above. Laboratory analysis of Benzene, BTEX, and TPH concentrations will be performed by an approved and NELAC accredited laboratory using Methods 8021B and SW8015Mod, respectively.

Chlorides will be addressed as part of the site reclamation with particular attention paid to the root zone (top four feet of soil). Soil with chloride concentrations greater than 1,000 ppm within the root zone will be removed and properly disposed of at an approved facility. Delineation of chlorides will be performed using field titrations to 250 ppm and confirmed with laboratory analysis of composite samples from the excavation walls and 4' excavation floor (Method EPA 300). Feathering of the site with native soils and reseedling with a BLM approved seed mixture will be performed after cleanup confirmation.

Please let us know if you have any questions regarding the work plan outlined within this message. If acceptable to both the NMOCD and the BLM, we will schedule the field work portion of the job, perform the appropriate one-call and provide required 48-hour notification to the OCD and the BLM. Please advise of your approval or disapproval of the remediation work plan addressed above.

Thank you,

Debi Moore
