Re: Closure Report

XTO – Poker Lake Unit 078

NMOCD Reference #: 2RP-3980

Mr. Mike Bratcher & Ms. Maria Pruett:

RXSoil, Inc. is pleased to submit the Closure Report summarizing the on-site soil remediation of produced water and crude oil impacted soil at the Poker Lake Unit (“PLU”) 078 site located in Eddy County, New Mexico.

Sincerely,

A handwritten signature in black ink, appearing to read "Jace Caraway".

## I. Introduction

On behalf of XTO Energy, RXSoil, Inc. has prepared this closure report that describes the remedial action of 2RP-3980 at Poker Lake Unit ("PLU") 078 (32.194685, -103.828119), API No. 30-015-27536.

Poker Lake Unit 078 is located in Unit Letter A, Section 25, Township 24S, Range 30E (see "Vicinity Map", *Figure 1*). The C-141 (*Appendix A*), approved November 9, 2016, indicates a storm on November 3 knocked out power to the battery, causing water system tanks to overfill. It was reported that 2,525 barrels of produced water and 130 barrels of oil were released (See "Spill Map", *Figure 2*), and that 2,080 barrels of produced water and 130 barrels of oil were recovered during the initial response. The initial response also included using a dozer to scrape off surface contamination and create piles of this contaminated material to prevent further horizontal spreading of affected areas.

## II. Regulatory Guidelines

The New Mexico Water Rights Reporting System indicates the only water source data point within 2,500 meters of the release shows depth to ground water of 400 feet (*Appendix B*). This well is approximately 1.5 miles west of the release (see *Figure 3*). An Eddy County Depth to Ground Water map (*Figure 4*, dated February 2005) signifies depths between 350 and 375 feet. This is evidence that the depth to ground water is greater than 100 feet, scoring zero (0) for that section.

The site is also greater than 1,000 feet from all water sources and any surface water, as shown in the NM OCD Oil and Gas Map with the Hydrology Layer in *Figure 3*.

The ranking score for this site's threat to public health, ground water and environment therefore is zero (0).

Depth to Ground Water:			
(Vertical distance from contaminants to seasonal high water elevation of groundwater)	Less than 50 feet	20 points	
	50 feet to 99 feet	10 points	
	>100 feet	0 points	X
Wellhead Protection Area:			
(Less than 200 feet from a private domestic water source; or less than 1000 feet from all other water sources)	Yes	20 points	
	No	0 points	X
Distance to Surface Water:			
(Horizontal distance to perennial lakes, ponds, rivers, streams, creeks, irrigation canals and ditches)	Less than 200 feet	20 points	
	200 feet to 1000 feet	10 points	
	>1000 feet	0 points	X
RANKING SCORE (TOTAL POINTS)			0

The target cleanup levels are determined using the *Guidelines for Remediation of Leaks, Spills and Releases* published by the NMOCD (August 13, 1993). The Recommended Remediation Action Levels (RRAL) for the associated classification are **10** parts per million (ppm) benzene, **50** ppm combined benzene, toluene, ethyl benzene, and total xylenes (BTEX), **5,000** ppm total petroleum hydrocarbons (TPH) and **600** ppm chlorides.

Post-remediation discrete confirmation samples were collected and properly packaged, preserved

and transported to Cardinal Laboratories in Hobbs, NM to be analyzed for BTEX (Method 8021), TPH (Method 8015) and chloride (Method 4500).

### **III. Delineation Report**

RXSoil contracted Atkins Engineering Associates to conduct vertical delineation by drilling four bore holes throughout the impacted regions. Field screenings were taken throughout the process and drilling continued until there was 10' vertical depth of chloride readings less than or equal to 600 ppm.

Samples were tested by Cardinal Laboratories in Hobbs, NM. A delineation map and summary table of results can be found in *Appendix C*, while the full laboratory report can be found in *Appendix F*.

Horizontal delineation was conducted during excavation. This process is outlined in **Section IV**.

### **IV. Soil Remediation Activity**

The remediation of this release was combined with the remediation of nearby 2RP-3503 (PLU 139). Impacted material from PLU 139 was excavated to a depth of 4' and replaced with clean material from an area adjacent to PLU 078. The verification that all material was clean is described in more detail in the Closure Report for 2RP-3503, submitted May 11, 2018.

RXSoil excavated four treatment cells with a depth of 4' at PLU 078 for in-situ remediation of soil impacted by produced water and crude oil. Sidewall samples were collected along the outer edges of treatment cells to guide excavation. Excavation occurred until field screenings tested below threshold for chlorides. Bottom samples were also collected throughout the excavation area. Sidewall and bottom samples were transferred on ice and tested by Cardinal Laboratories.

During the initial response to the release, a pile of contaminated material was contained to one area near the flare stack. A small area around this pile was determined to be above threshold for chlorides. Excavation occurred in this area to a depth of 4' until all sidewalls tested below limit. Two bottom samples were collected from this area as well. All final samples were field screened for chlorides and sent on ice to Cardinal Laboratories in Hobbs, NM for chloride, TPH and BTEX testing.

Maps of all sidewall and bottom samples, as well as the summary table of all excavation results can be seen in *Appendix D*.

Polyliner was placed on the bottom and sides of the treatment cell area, as demarcated on the Treatment Cell Map in *Appendix D*, to contain treatment. Bottom samples in the flare area at 4' depth tested above RRAL for chlorides and polyliner was placed on the subsurface before backfill with clean material. After impacted material was placed into the treatment cells, a proprietary delivery system was installed to apply RXSoil chemicals for remediation of the soil. At no point did contaminated material come into contact with clean soil following excavation.

A proprietary blend of chemicals and microbial agents was applied to extract the contaminants. Chemicals used in the process were all collected in sump areas, located in a corner of each of the four cells, and properly disposed of.

Samples were collected throughout the treatment process to monitor progress. Upon completion of remediation in each cell, closure samples were collected at various depths throughout the treatment cells. These samples were put on ice, field screened, and a portion of these were transported to Cardinal Laboratories for chloride, TPH and BTEX testing. Remediation continued until all treatment samples tested below thresholds, as listed in **Section II**.

A full remediation report can be found as *Appendix E*. This includes a summary table and sample maps for each cell.

All corresponding lab reports are in the attachment *Lab Report Compilation for 2RP-3980*.

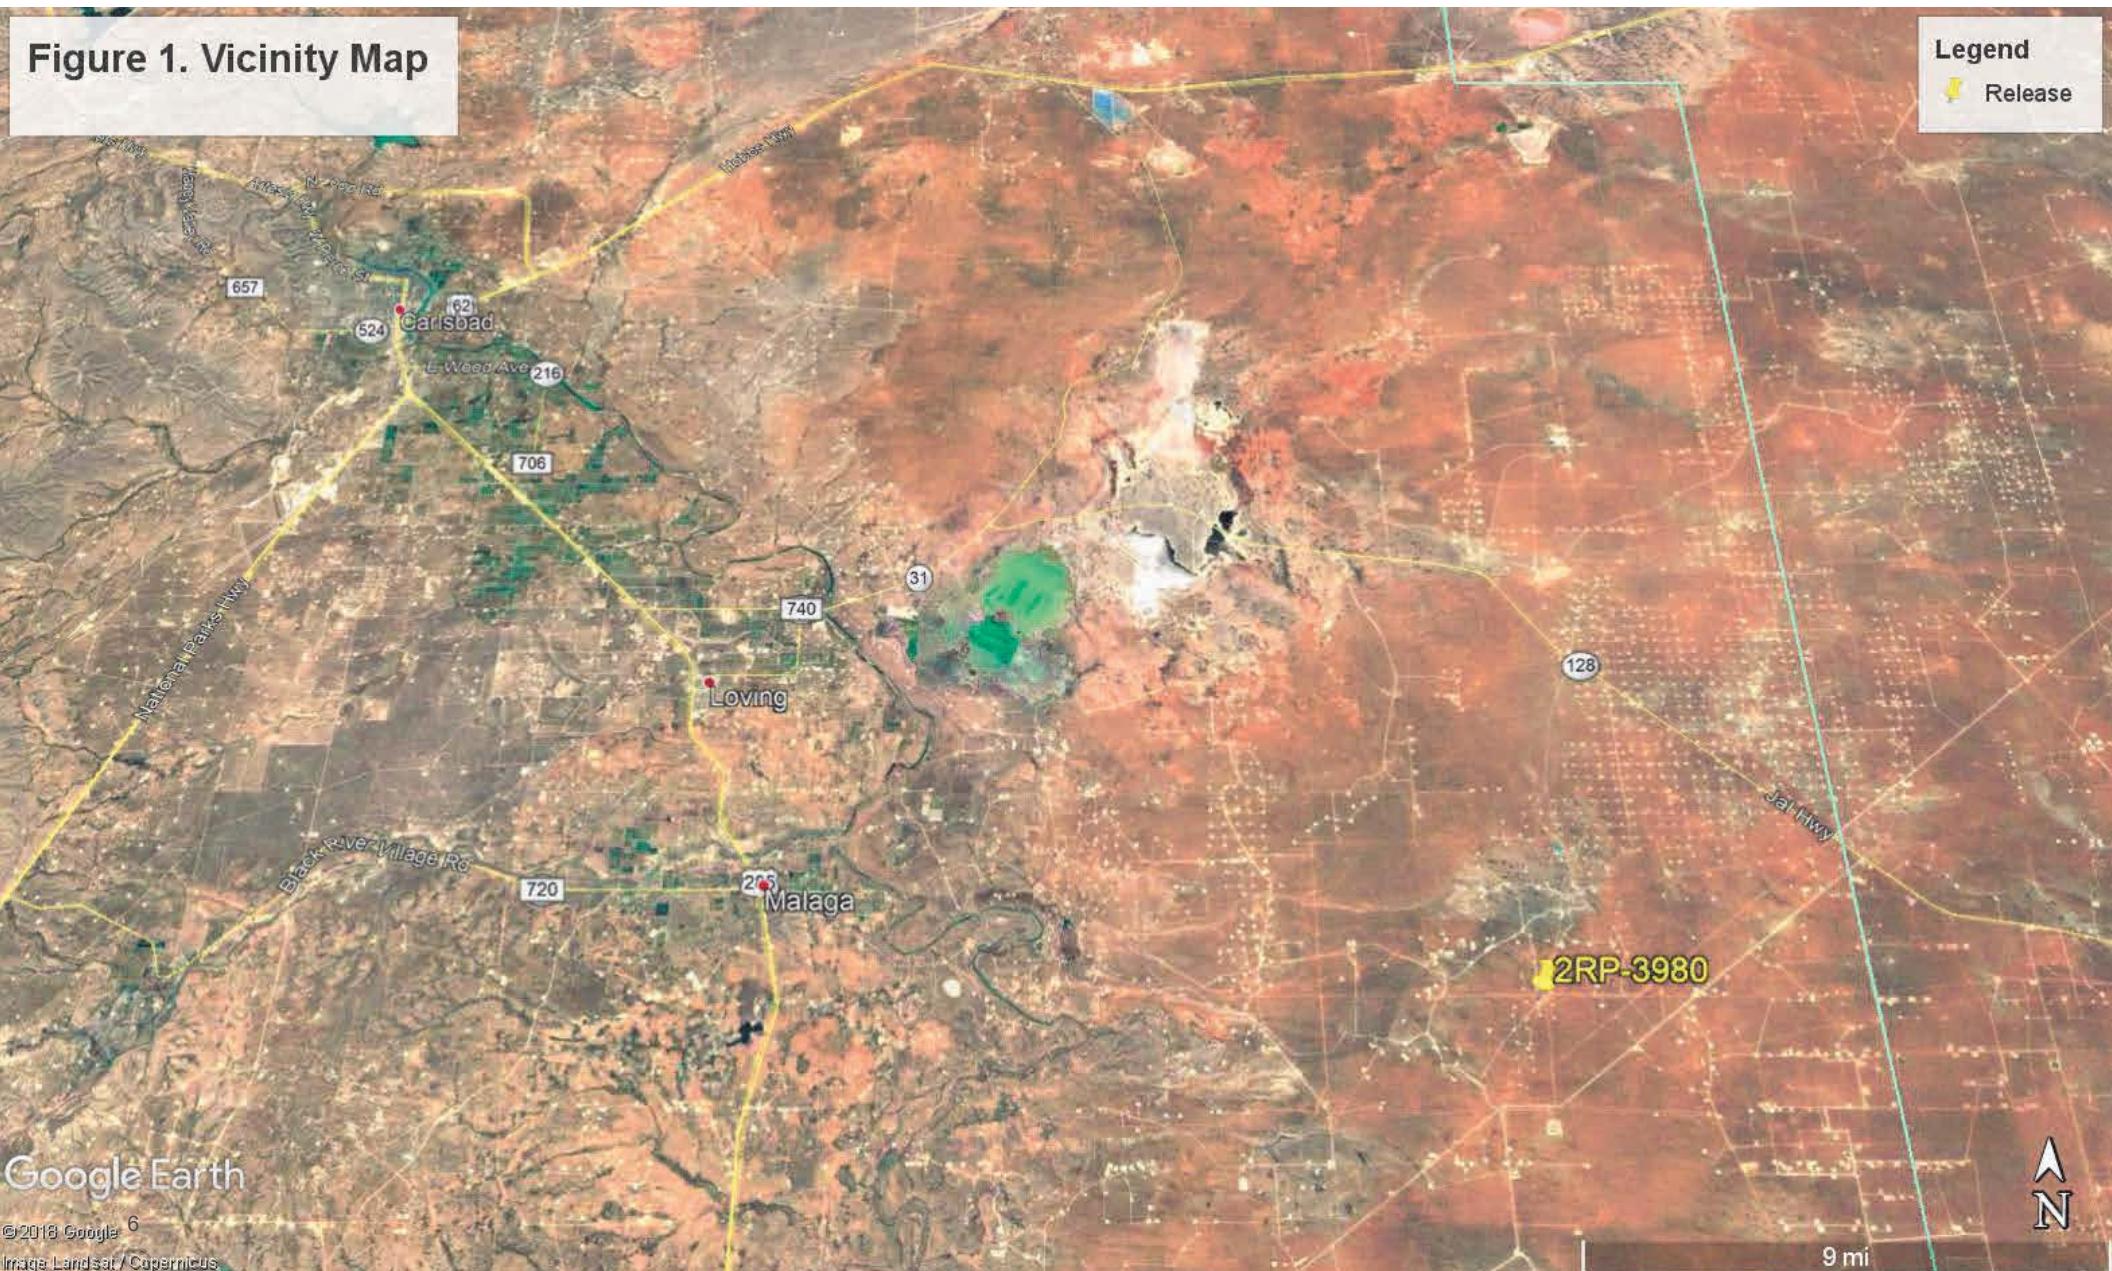

#### V. Conclusions

The area was contoured to the surrounding surface landscape and hydroseeded with BLM #2 seed mix as directed by the New Mexico Bureau of Land Management (“BLM”).

RXSoil is pleased to submit this Closure Report on behalf of XTO to the NMOCD. Laboratory results show all excavation and final confirmation tests of chloride, BTEX and TPH concentrations to be below thresholds set by the NMOCD.

RXSoil is recommending no further action be taken in the remediation of the release 2RP-3980.

**NATURE OF RELEASE**

Type of Release: Crude Oil/ Produced Water	Volume of Release: 2525 barrels PW 130 barrels Oil	Volume Recovered: 2080 PW Recovered 130 barrels Oil recovered
Source of Release: Power failure at the battery causing PW system tanks to overflow, filling and overflowing containment.	Date and Hour of Occurrence: 11-3-16 @ 12:32am	Date and Hour of Discovery 11-3-16 @ 7:00am
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? Mike Bratcher, Heather Patterson, Jim Amos via email	
By Whom? Bradley Blevins	Date and Hour: 11-3-16 @ 12:37pm	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*

BOPCO EHS was notified of a release that occurred at the PLU 78, storms in the area knocked out power to the battery causing water system tanks to fill and run over. The fluid filled the containment and overflowed to the ground surface. Vacuum trucks were called to the location and recovered 2210 barrels from the containment and ground surface combined.

Describe Area Affected and Cleanup Action Taken.\*

Vacuum trucks were called to the location and recovered 2210 barrels from the containment and ground surface combined. An initial response crew was dispatched to the site and began scraping up the saturated surface soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

<b>NMOC Thresholds</b>					600	600	10	50	5000

**BOLD** results indicate results above RRAL

- indicates tests were not ran

"ND" indicates a non-detectable result, below testing limits

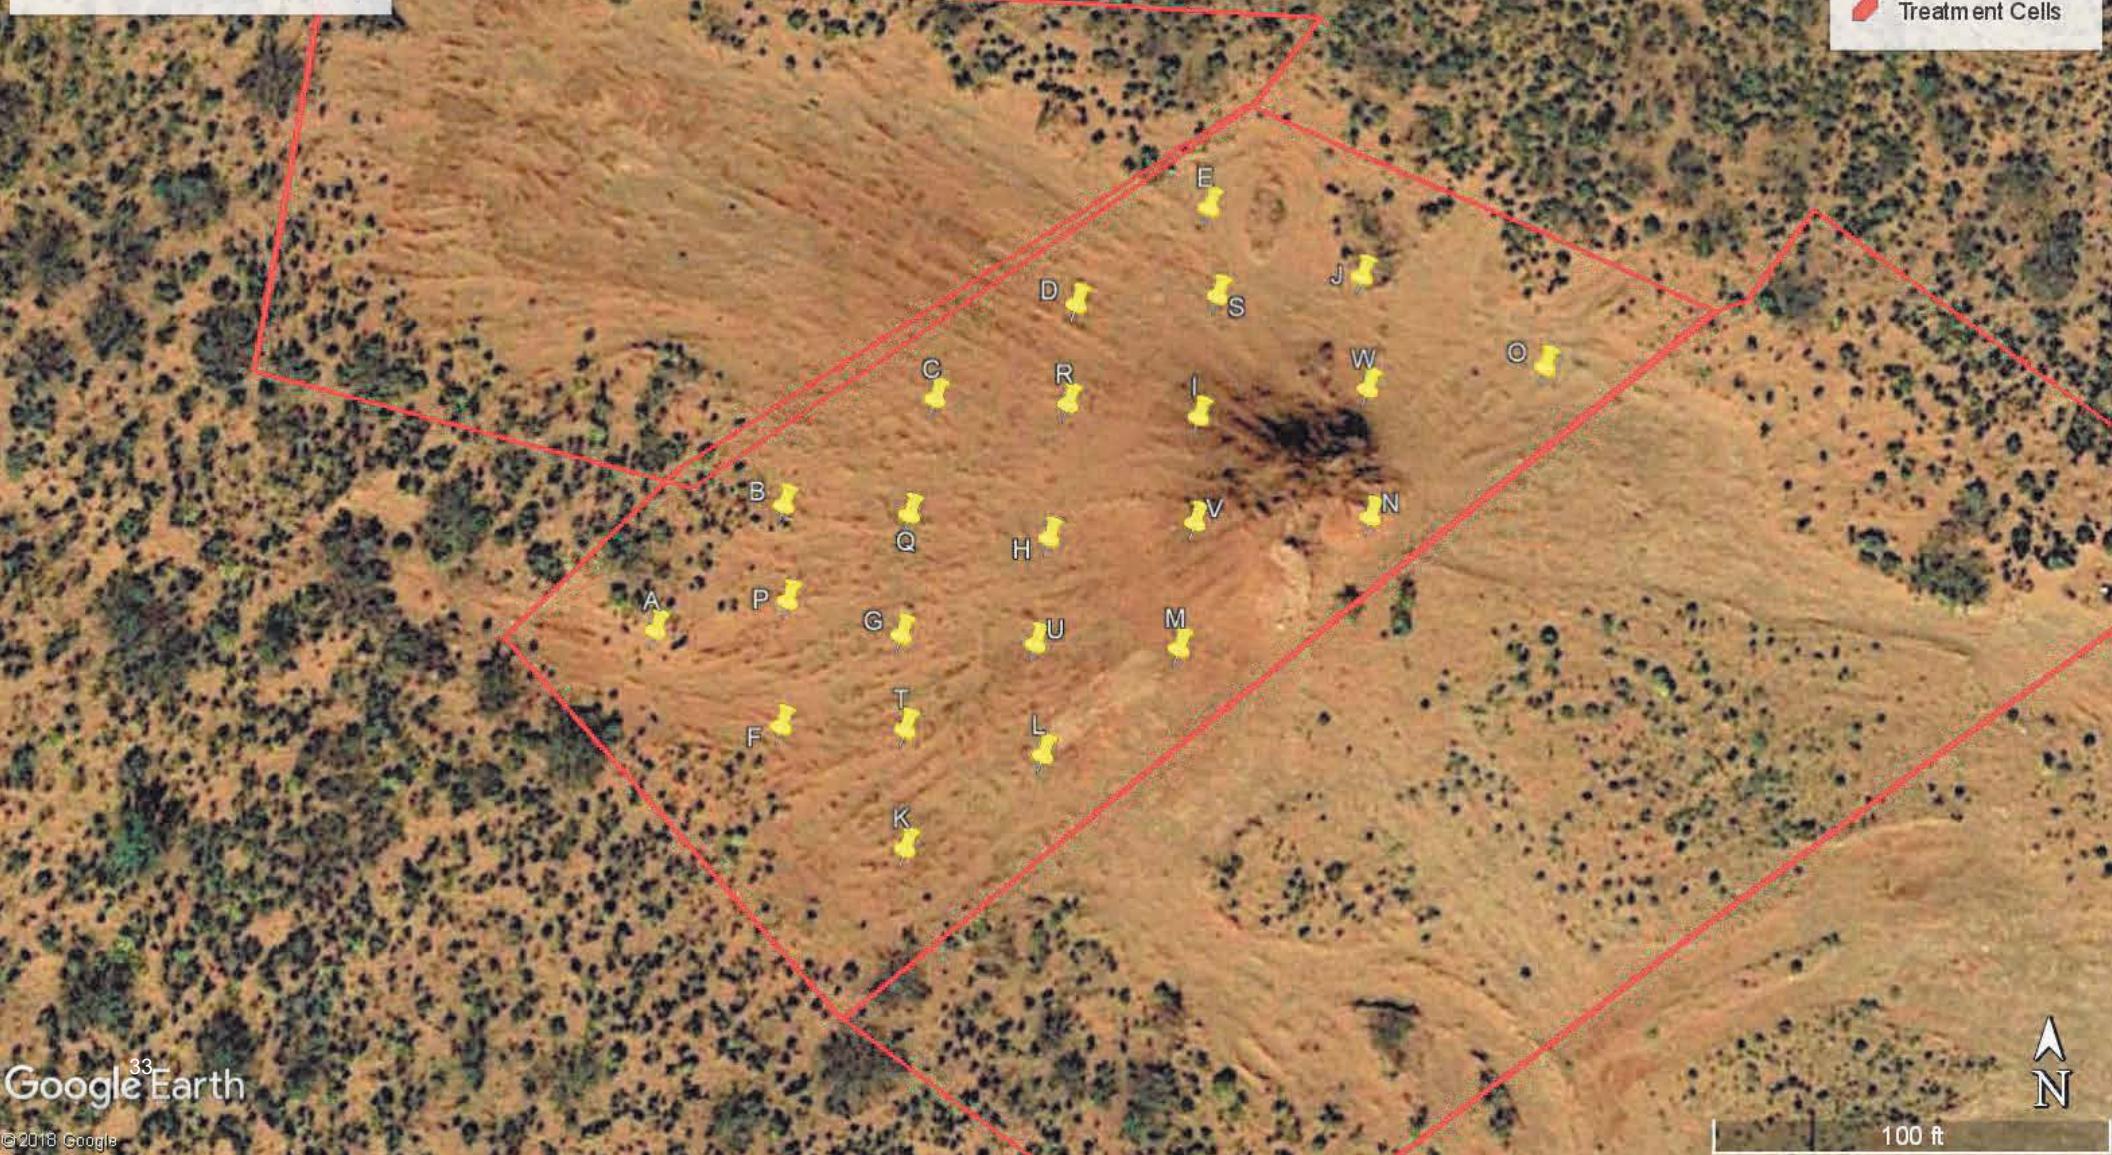

Green indicates remediation continued, see following sample
