Thank you for the update.

I talked with Natalie this morning, she is going to provide a map and they are going to start with the removal of oil/contaminated soil on the surface area needing to be cleaned up.

They will then take samples of the area after to see if they have removed it all or if more work is needed.

Thanks,  
RF

Good afternoon,

This afternoon at approximately 11:56 am, a third party was contractor was in process of flushing the flowline when one of the fittings failed, releasing 6.47 bbls of oil. The fitting was found to be corroded. The crew was in process of flushing the line during wellsite abandonment. An emergency one call was placed to begin remediation.

A C141 will be submitted shortly.

Thank you,

*Callie Karrigan*
