Jim

Per our conversation, I have attached a list of some of our more recent releases, where we have used the bio-remediation process. Please feel free to contact me if there are any additional questions you may have about the results.

The process of application is that the bio-remediation product is mixed with fresh water & then applied to the impacted area. The product is applied once a week for 8 weeks, and then samples are collected & sent to the lab. Pending the analytical results, another cycle of the bio-remediation is performed, or a closure report is submitted. I am working on getting the product information for you. I don't know that the product is not on the NMOC list of harmful chemicals.

I have contacted a C&M services & and I have them set up to delineate the impact. I will make sure that the sundry is completed prior to the delineation.

Let me know if there is anything else you need.

Johnny,

In reviewing your work plan I'm seeing incomplete delineation of the impacted area. The BLM will require at a minimum delineation down to 600 mg/l. Once this is achieved, submit copies of analyticals and a Sundry Notice Form 3160-5 for the surface disturbance that would be required for remediation. The current proposal won't be considered until complete delineation is provided. If any questions, please let me know.

Thanks

Johnny,

This remediation proposal can not be approved as submitted. Site characterizations, remediation proposals, and closures are required to follow the current spill rule 19.15.29, and be submitted with the appropriate attachments and C-141 pages.

Thank you,

Mike Bratcher
