CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Mr. Hamlet,

Our 90 day extension due date for the subject incident is 1/26/2022. The surface lines have been moved and we have completed the delineation of the release area. However, during the course of delineation activities it became evident that we had encountered historical contamination. Chloride levels were above the NMOCD closure criteria at deeper depths than would be expected, and now high TPH levels at eight and ten feet bgs at sample locations SP1 and SP2. Also, Durango is going to pursue discussions with Apache regarding their part in the remediation process. For these reasons

we are requesting a 60-90 day extension on our 60 day extension deadline to allow us time to complete these actions and properly remediate the area. Delineation Sample Map and Analytical Table are attached. Also attached is an overhead shot of the location after surface lines were moved.

Respectfully,

Daniel Dominguez
