Describe Cause of Problem and Remedial Action Taken.*

Nipple on rear of tank broke, causing condensate to leak, leave location, and run out into sand.

Describe Area Affected and Cleanup Action Taken.*

Sand was picked up, placed on plastic on location, nutrients were added, and land farmed in place, the ditch where the sand was removed was sprayed with Microblaze. Samples were taken 03-29-04 from the ditch, the land farm (Composite- 5 spot) and behind the tank where the leak occurred, there was no trace of BTEX, and the analyticals came back as Pit area-0ppm, Tank area-1800ppm, land farm-1500ppm. Request closure on this site.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
