13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

The referenced well is currently SI because it's tubing pressure is above the permitted injection pressure. We believe the well has filled up the intervals currently perforated. Devon proposes to TA this well for five years, with annual casing integrity tests. The well has a packer in the hole at 1,606'. TA procedure would be as follows:

1. MIRU pump truck.
2. Tie onto tubing casing annulus. Load hole with lease water and test to 300 ⁵⁰⁰ psi for 30 minutes. *W/ 500 psi change
3. RDMO pump truck.

We request this TA status for the well as it is in our West Redlake Unit waterflood. The well therefore has utility should additional intervals in the San Andres be perforated and flooded, and uphole potential has also been identified. As the WRLU is expected to produce for quite some time,

Additional data for EC transaction #51295 that would not fit on the form

32. Additional remarks, continued

the potential usefulness of this well will also be ongoing. As this situation is not expected to change, we are requesting a longer term temporary abandonment.
