**NATURE OF RELEASE**

|  |  |   |
|--|--|---|
| Type of Release An overspray of oil and produced water   | Volume of Release 136 bbls                     | Volume Recovered 0 bbls                     |
| Source of Release Well Tester  | Date and Hour of Occurrence 7/5/2014 7:00 PM   | Date and Hour of Discovery 7/5/2014 7:00 PM |
| Was Immediate Notice Given?<br><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Required | If YES, To Whom?                               |   |
| By Whom? Kyle Norman   | Date and Hour: Email BLM and NMOCD on 7/7/2014 |   |
| Was a Watercourse Reached?<br><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No  | If YES, Volume Impacting the Watercourse.      |   |

If a Watercourse was Impacted, Describe Fully.\*  
Describe Cause of Problem and Remedial Action Taken.\* The well had a well tester on it. The well tester pressured up and popped off causing an over spray of oil and produced water.

Describe Area Affected and Cleanup Action Taken.\* A total of 1,014,373 sq ft of lease pad and pasture land was affected by the release. RECS personnel were on site beginning on July 7<sup>th</sup>, 2014, to assess the release. Surface samples were taken at seven points within the release area, and two points were sampled with depth. The samples were taken to a commercial laboratory for analysis. Based on the laboratory analysis, a Corrective Action Plan (CAP) was submitted to NMOCD and BLM on August 1<sup>st</sup>, 2014. NMOCD approved the CAP on August 1<sup>st</sup>, 2014, with the stipulation that horizontal and vertical confirmation samples would be taken from the area where the fluids pooled. RECS discussed the CAP with BLM on August 4<sup>th</sup>, 2014, and BLM verbalized its concerns with portions of the CAP. Based on this conversation, an Amendment to the CAP was submitted to NMOCD and BLM on August 4<sup>th</sup>, 2014, to address these concerns. BLM approved the Amendment to the CAP on August 4<sup>th</sup>, 2014, and NMOCD approved the Amendment to the CAP on August 7<sup>th</sup>, 2014. RECS personnel were on site beginning on August 11<sup>th</sup>, 2014, to conduct CAP work. Micro-Blaze was applied to the overspray area in the pasture. The area on the pad, where the fluids pooled, was scraped down to 6 inches bgs. Once the scrape was completed, final grab samples from the walls of the scrape and a final bottom composite from the base of the scrape were taken and field tested for chlorides and organic vapors. The samples were then taken to a commercial laboratory for analysis. NMOCD gave approval to backfill the site on September 9<sup>th</sup>, 2014. A total of 252 cubic yards of contaminated soil was taken to a NMOCD approved facility for disposal, and a total of 348 cubic yards of caliche was imported to the site to serve as backfill. A sample of the imported caliche was taken to a commercial laboratory for analysis. The scrape was backfilled with the imported caliche and contoured to the surrounding location.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
