NATURE OF RELEASE

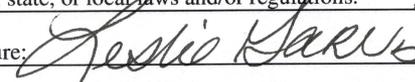

Type of Release Produced Water	Volume of Release 35 bbls	Volume Recovered 6 bbls
Source of Release Transfer Pump	Date and Hour of Occurrence 11/23/14	Date and Hour of Discovery 11/23/14
Was Immediate Notice Given? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? Jeffery Robertson – BLM Carlsbad 11/23/14	
By Whom? Rodney Standard	Date and Hour 11/23/14 10:30 am	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.* Discharge line on transfer pump over-pressurized and ruptured.

Describe Area Affected and Cleanup Action Taken.* A total of 12,908 sq ft of bermed battery, lease road and pasture land was affected by the 2RP-2233 release. This release (2RP-2628) was over the top of 2RP-2233 release. Burnett discussed the 2RP-2628 release with NMOCD and BLM, and they agreed that this release would be remediated with the 2RP-2233 release's approved CAP. The CAP for the 2RP-2233 release was submitted to NMOCD and BLM on November 4th, 2014. Both NMOCD and BLM approved the CAP on November 5th, 2014; however both agencies imposed stipulations in conjunction with their approvals. Corrective action activities began at the site on November 20th, 2014. The release area was scraped in seven portions. In total, 1,332 cubic yards of contaminated soil from the pasture areas and the battery were taken to a NMOCD approved facility for disposal. Once the 8 inch scrape in the battery and the 6 inch scrape over the caliche road were completed, bottom composite samples from each scrape were taken and sent to a commercial laboratory for analyses. Once the excavation to 4 ft bgs around Point 6 was completed, 8 wall samples were taken from the completed excavation and sent to a commercial laboratory for analyses. On December 12th, 2014, a request to install the 20-mil reinforced poly liner in the 4 ft excavation and to backfill the excavations outside the facility was sent to NMOCD and BLM for their approval. BLM approved the request on December 12th, 2014, and NMOCD approved the request on December 18th, 2014. On December 15th, 2014, a 20-mil reinforced poly liner was installed and properly seated into the base of the 4 ft excavation. A total of 1,640 cubic yards of top soil was imported to the site to backfill the pasture areas. A sample of this imported top soil was taken to a commercial laboratory and returned a chloride value of non-detect. The pasture area was backfilled with the imported top soil and contoured to the surrounding location. On December 22nd, 2014, a request to backfill the battery was sent to NMOCD and BLM. NMOCD approved the request on December 26th, 2014, and BLM approved the request on January 5th, 2015. A total of 444 cubic yards of caliche was imported to the site to backfill the battery and build berms. On January 7th, 2014, soil amendments were added to the disturbed areas in the pasture, and then the areas were seeded with LPC mix.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
