If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
A 4" poli line at the edge of location is connected to an 8" trunk line. The valve somehow got opened and the check valve failed. There was evidence of the line being run over by a truck which may have damaged the check valve. DFSI sampled the soil in the area and obtained a clean sample at 10' bgs.

Describe Area Affected and Cleanup Action Taken.*
The entire spill area was excavated to 4'bgs. DFSI personnel used the surrounding terrain to backfill and contour the area. More than five pounds of BLM #4 mix seed was then applied to area, and the site was restored to its previous state.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
