Describe Cause of Problem and Remedial Action Taken.\*

While maintenance was being performed, the crew blocked and bled flare by-pass. Condensate hit the flare stack and resulted in a small fire. The crew returned valves to normal positions and shut down the job.

Describe Area Affected and Cleanup Action Taken.\*

The fluids affected a very small area near the flare stack on the well pad. Minimal fluids affected the pad due to burning off prior to making contact with the ground. Environmental crew scraped and disposed of the impacted soil, and backfilled with clean gravel.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
