Casing Running and BOP Testing Procedure with Speed Wellhead Assembly

Surface:

1. PU and RIH with 13 ¾", 48#, J55, STC casing. Install Texas pattern guide shoe on bottom and float collar at 1 jt up from shoe. Thread lock float equipment. Install centralizers at 5' above shoe, 5' above float collar, and 1 every third joint to surface. Pump through float equipment to insure open before RIH. PU speed wellhead assembly as last casing jt and land assembly on top of conductor casing. With casing on bottom, circulate with rig pumps a minimum of 1 casing capacity while rigging up cementers. After cementing and bumping plug with 500 psi over, weld base plate to conductor. Install 2" ball valve on one side and 2" bull plug on other side of wellhead housing. Test BOPs to 250/5000 psi on chart.

Intermediate:

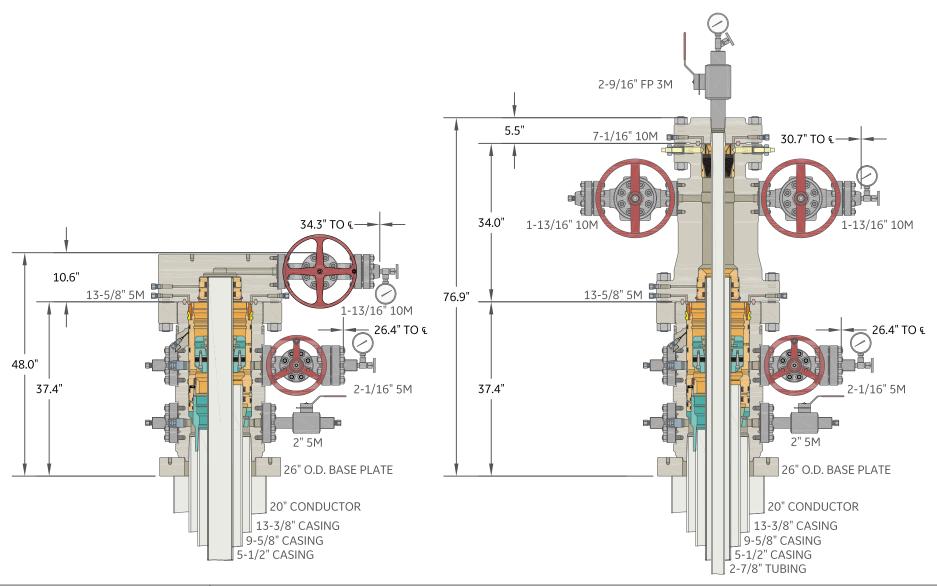

2. RU casing tools and run 3000′, 9 ¾", 43.5#, HCP110, BTC casing followed by 9 5/8", 40#, HCP110, BTC casing. Install float shoe on bottom and float collar 1 jt above shoe. Thread lock shoe and float collar. Install centralizers at 5′ above shoe, 5′ above float collar, and 1 every 3rd joint through bottom 500′ of casing. Install DV tool at 3000′ with Weatherford ACP at 1 jt below DV. Install centralizers every third joint for 500′ above DV. Pump through float equipment to ensure open before RIH. PU 9 5/8" speed heading landing assembly. Land Hanger inside speed wellhead assembly. (Verify landing through LWR test/sight port). With casing on bottom, RU cement head and circulate rig pumps a min of 1 casing capacity. After cementing, drop closing plug, displace with OBM and close DV tool. Run RSH-2-N Packoff with Lock Ring and install packoff into speed wellhead system. Packoff will be landed above wellhead hanger neck. Engage lock ring and set packoff. Have wash tool on location to ensure wellhead will accept packoff. After system is installed, install 2"5 M gate valve on one side and bull plug on other side.

Test BOPs to 250/5000 psi on chart only if last test was greater than 30 days or the seal has been broken.

Production:

BOP must be tested after installation and before drilling out the previous shoe; break testing is not approved. DR

3. RU casing crew and torque turn. Run 5 ½", 20#, HCP110RY, BTC & BPN casing string with BTC casing on bottom and x-over at heel (Note: BTC and BPN will screw together so no x-over joint is necessary). Install Weatherford double valve float shoe with plug receptacle on bottom. Thread lock shoe. Install spiral gliders on shoe joint and every second joint through curve, Install bow spring centralizer just above the 9 ¾" shoe. Install 5 ½" marker joints at about 14,000′, 12,000′, 10,500′, and 9000′. Run casing to TD, RU cement head, and circulate with rig pumps either bottoms up or casing capacity whichever is larger. With cement in place, lift BOP's and set casing slips with full string weight. Cut off casing, ND BOP's, and install 11" 5M X 7 1/16" 10M tubing head with 2 − 2" FO with 2- 2 1/16" 10m gate valves. Install dry hole cap.

Pressure Control

20" X 13-3/8" X 9-5/8" X 5-1/2" X 2-7/8" 10M RSH-2-N WELLHEAD ASSEMBLY, WITH TA CAP ASSEMBLY, T-EBS-F TUBING HEAD, TC STRIPPER RUBBER AND B5 ADAPTER FLANGE

PECOS DISTRICT DRILLING OPERATIONS CONDITIONS OF APPROVAL

OPERATOR'S NAME: Murchison Oil & Gas LLC

LEASE NO.: NMNM107384

WELL NAME & NO.: | Rock Ridge Federal 9H, 10H, & 11H

LOCATION: Section 30, T 24S, R 29E, NMPM

COUNTY: | **Eddy County, New Mexico**

A. PRESSURE CONTROL

1. Break testing for these wells is not approved. BOP must be tested upon installation and before drilling out the previous shoe.

- 2. The operator has proposed a multi-bowl wellhead assembly, see attached schematic. The following requirements must be met:
 - a. Wellhead shall be installed by manufacturer's representatives, submit documentation with subsequent sundry.
 - b. If the welding is performed by a third party, the manufacturer's representative shall monitor the temperature to verify that it does not exceed the maximum temperature of the seal.
 - c. Manufacturer representative shall install the test plug for the initial BOP test.
 - d. If the cement does not circulate and one inch operations would have been possible with a standard wellhead, the well head shall be cut off, cementing operations performed and another wellhead installed.
 - e. Whenever any seal subject to test pressure is broken, all the tests in Onshore Order 2 III.A.2.i must be followed.
