Subject: [EXT] RE: 30 015 46627 - Shelby 23 5H

Kurt,
I spoke to my geologist about this and it appears the tops you are referencing are what was referenced in the drill plan but by no means designate the yeso.
For instance, the base of the yeso in Shelby 23 4H is 4100' TVD.

Does the help? Did I answer your question? I also tried to pull the N. Seven Rivers; Glorieta-Yeso pool rules but can't find them in the Byram books.
Do you have any recommendation on how I could find them?

Thanks,

Sarah Chapman

[EXTERNAL]
Hi Sarah,

I am reviewing the C-104 for this well. The perfs are given as 3662'-8789' MD or approximately 3176'-3164' TVD. The C-102 plat and supporting documents filed Jan. 21, 2020 give the target Glorieta-Yeso formation as spanning 2385'-2915' TVD. This would put your perfs outside the target zone.

Can I get you to verify the picks for the Glorieta-Yeso for this well, so we can determine if the perms are in the correct zone?

Thank you,

Kurt Simmons
