13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

Request permission for a tubingless completion. Tubingless completion will allow for more production after stimulation. Preliminary estimate is that a tubingless completion will continue for approximately 2 years. Novo will install tubing once the flow decreases.

Goonch Fed Com 214H - Addendum to Tubing Exception Request

Tubing will be run in the well at a later date as surface pressures and flow rates dictate. Due to the high flow rates and high surface casing pressure experienced at this time, Novo Oil & Gas would like to defer the installation of tubing until a later date.

The installation of tubing at this time would create an unnecessary safety risk, create waste of an extra tubing string, and restrict production rate. Novo Oil & Gas would incur an additional expense of \$40,000 to run tubing, the installation of tubing will restrict flow up the 2-7/8" or 3-1/2" tubing, and it is potentially an unsafe operation (+/-4000 psi surface casing pressure).
