13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

The Geronimo 28 State SWD No. 2 was originally intended to be drilled and completed as a produced water disposal well in the Devonian/Ellenburger formations through perforations from approximately 11,404 feet to 12,500 feet. The well was to be drilled to a total depth of 12,500 feet and 7" casing was to be set at 12,500' and cemented to a depth of approximately 3,000 feet. Division Order No. SWD-1378-A approved injection in this well within the Devonian/Ellenburger formations.

After evaluating the injectivity of the Devonian/Ellenburger formations in an offset disposal well, Apache has instead elected to drill and complete the Geronimo 28 State SWD No. 2 as a produced water disposal well in the Wolfcamp/Cisco interval from approximately 7,176 feet to 9,150 feet. The well has been drilled to a total depth of 9,500 feet and casing was set in the well as per the attached wellbore diagram.

A Form C-108 application has been filed with the OCD Santa Fe Office seeking to amend Order No. SWD-1378-A to authorize injection into the Wolfcamp/Cisco interval. Once the requested amendment is approved, Apache requests approval to commence completion operations by perforating selected Wolfcamp/Cisco intervals in the well from 7,176 feet to 9,150 feet.
