32. Additional remarks, continued

approximately 12 frac tanks on the water line ROW and 9 tanks along the road, but not on our ROW. We are not planning on digging and only doing minimal surface damage by placing the tanks on the naturally flat land along the road. The tanks would be in place for approximately two weeks and they would be filled with only fresh water. I feel this is a much better option than building a frac reservoir as it will do minimal surface damage and will only be in place for a short period of time.
