Gasket failed on heater treater due to corrosion. Replaced gasket to prevent future spills.					
Describe Area Affected and Cleanup Action Taken.*					
Initially an estimated 3bbls of oil and 10bbls of produced water were released from a gasket that failed on a heater treater. We were unable to recover any fluids. The release was contained on location. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a work plan to the NMOC D for approval prior to any significant remediation work.					
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC D rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC D marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC D acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
