I closed the circulating line valve on the production tank and closed the valves at the pump also to stop the fluid. Describe Area Affected and Cleanup Action Taken.* : The affected area was about 80 feet from the leak running west to east and about 240 feet running north to south. The closest well to the leak area is well #274 on the westside of the battery. Called Double R trucking to pick up the oil off the ground to try to save the oil but the truck was sucking up alot of sand and rocks with it. The truck picked up about 25 barrels of oil off the ground. We lost about 40 barrels of oil total. I called Diversified to come out and fix the leak. The cause of the leak was an old 2 inch clamp on an old 2 inch steel line coming from

The cause of the leak was an old 2 inch clamp on an old 2 inch steel line coming from	battery and the water tank. I drove around the water tank firewall and found the oil coming out of the ground behind the battery outside of the firewall. I heard the circulating pump running so i ran to the pannel box and shut the power off. I closed the circulating line valve on the production tank and closed

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
