Was a Watercourse Reached? Yes No If YES, Volume Impacting the Watercourse. NM OIL CONSERVATION ARTESTA DISTRICT JUN 0 9 2014 RECEIVED Describe Cause of Problem and Remedial Action Taken.* The crews were performing line integrity test on the flow lines coming into the tank battery. After completion of the test on the PLU-324H a valve was left closed on the header and the well was put back on line. The excessive pressure blew out one of the Victaulic gaskets on the well header. The wells were shut in and the gasket was replace as a previous spill that had been partially excavated and sampled for compliance. Reference 2RP-1012. The saturated soil will be excavated by hand and a hydro-vac as far as practicable around the process lines and vessels. Samples will be collected after the soil removal to determine the total vertical and horizontal extent of the spill. A summary of the activities will be submitted following the completion of the field work. I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. OIL CONSERVATION DIVISION Approved by Environmental Specialist: OCModitions of Approval: Remediation per OCD Rule & Guidelines, & Ikee approval by BLM, SUBMIT REMEDIATION.
