If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

Swedge reducer on the back of an oil tank failed due to corrosion. The tank was in the process of draining into the secondary containment when discovered by oil hauler. To stop the release the oil hauler applied a clamp to leak. A vacuum truck was used to empty the rest of the fluid in tank in order to replace swedge reducer. Vacuum truck was then used to recover approximately 20 bbls of oil.

Describe Area Affected and Cleanup Action Taken.*

Affected area- Inside the secondary containment.
Cleanup- Vacuum truck sucked up standing fluid from inside the containment (a total of 20 bbls were recovered and put back into oil tank), pressure washer cleaned of tanks and secondary containment.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
