13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

The Hornsby 35 Fed 3H did not get required TOC on the 7" production string to approved TOC of 200' inside previous casing. The top of cement appears to be at 4,740'. The previous casing was set at 2,200'. Cimarex was required to bring cement 200' into previous casing. Cimarex proposes the following:

1. Perform injection rate test down 7" x 9-5/8" annulus to obtain injection rate and pressure. BLM engineer will be contacted by Cimarex engineer to finalize bradenhead squeeze procedure and volume.

2. Pump bradenhead squeeze down 7" x 9-5/8" annulus. Cimarex is currently planning to pump 460 sacks of 50/50 Poz/C at 11.9 ppg and 2.46 cf/sk. Volume is based on current top of cement at 4,740' to base of 9-5/8" casing (2,200') at 100% OH (8-3/4") excess plus cement volume to surface inside 9-5/8"x7" casing annulus.

Pressure test annulus to verify cement.

14. I hereby certify that the foregoing is true and correct.

Electronic Submission #265285 verified by the BLM Well Information System
For CIMAREX ENERGY COMPANY OF CO, sent to the Carlsbad
Committed to AFMSS for processing by CHRISTOPHER WALLS on 09/24/2014 (14CRW0327SE)
