| Was a Watercourse Reached? | <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | If YES, Volume Impacting the Watercourse. | N/A | | |

If a Watercourse was Impacted, Describe Fully.*

N/A

Describe Cause of Problem and Remedial Action Taken.*

While pumping a slick water stage (fresh water with friction reducing agent) the #1 pony rod clamp failed causing damage to the suction valve on the #1 frac pump allowing discharge pressure to reach the suction manifold and causing the 4" discharge hose to burst. The pump stage was immediately stopped and the failed pump and hose were isolated. Approximately 20 Bbls of "slick water" was released onto location. A vacuum truck on standby began picking up the spilled fluid immediately. Approximately 19 BBLs of "slick water" was recovered.

Describe Area Affected and Cleanup Action Taken.*

The remaining spilled fluid was covered with absorbent pads and removed prior to high wind and heavy rain covering the area.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
