Operator,

The NMOCD District II office is in receipt of a closure report for remediation of contaminated materials at the above referenced well site. The report was prepared and submitted by your agent, Allstate Environmental Services, LLC. The remediation project was performed on chloride impacted soils along the west and southwest fence line of the tank battery.

The report indicates soils were removed and hauled to CRI, an NMOCD approved disposal facility. The report further indicates that an analysis of soils left in place show NMOCD guidelines and requirements were met.

Thank you for your cooperation in this matter.

Sincerely,

A handwritten signature in cursive script that reads "Mike Bratcher".
