13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

We request that this well be classified as Temporarily Abandoned. The East Millman Unit is an active waterflood project with an on going infill drilling program and plans for conversion of existing wells to additional water injection wells. This well has beneficial use as a producing well or a future water injection well subsequent to the infill drilling program which will be completed over the next 2 years. Depending upon the success of the infill drilling program, well No. 6-5 will be reactivated as a producer or converted to a water injection well sometime during the next 2 years.

A casing integrity test as per the procedure below will be performed during the week of 11-28-05.

Well Data: Surface Casing: 8 5/8", set @ 270' w/50 sx cmt

Production Casing: 4 1/2", 9.5 lb/ft, set @ 2235' w/160 sx cmt. TOC @ 1535'

Perforations: Queen - 1740-1744', 1770-1776', 1939-1945'

Grayburg - 2106-2112', 2150-2156'

CIBP: Set at 1595'. Production casing is filled with corrosion inhibited fluid.

Casing Integrity Test Procedure: 1. Pressure casing to 500 psig and hold for 30 minutes.

14. I hereby certify that the foregoing is true and correct
