Director

**Oil Conservation Division**

February 10, 2006

Dear Mr. Gillete,

I need for you to submit as I requested on 1/24/2006 supporting documentation that the bottom hole location of the 1625 State # 221 gas well, that is operated by LCX Energy, LLC and located in Section 22-16S-25E, Eddy County New Mexico is standard according to NMOCD Rule 19.15.3.104(C)(2)(a)? **Or** what you described to me over the phone, I need supporting documentation (field reports, etc.) that some type of plug device has been set inside the well bore that the before mentioned rule is complied with.

Please provide as soon as possible so that you do not have to **shut this well in by 2/14/2006**.

Please call if you have any questions.

Yours truly,

Bryan Arrant

Bryan,

Please find the attached documentation showing that this well is an orthodox location.

The original plat shows that the section is slightly larger. The north line is 5382' long. The final projected BHL footages show the hole 83'N and 4021' W of the surface location. This puts our BHL at 700' from the west line without any corrections and 677' from the north line. Also attached is a casing detail showing the float collar at 8790' MD or PBTD. The casing float joint is 43' long. This is full of cement and was not drilled out. Also attached is the report showing the bottom most perforation at 8656'.

Please let me know if you need any further information concerning this well.

Thanks,

Larry Gillette  
LCX Energy LLC
