The Central tank battery is located at the Cerf 10 Fed 3H & Cerf 10 Fed Com 4H Battery, in Sec 9, T21S, R27E, in Eddy County, New Mexico. The production from the Cerf 10 Fed 3H & 4H will come into a common production header with isolation lines to route each wells production. From this point one will be on test and its production routed through the test equipment. VRU will be allocated back to each well utilizing a percentage of each wells monthly oil production.

The Cerf 10 Fed Com 4H Battery will have three oil tanks that both wells will utilize and they have a common Federal Measurement Point #885-33-192 on location in the northwest corner. Oil, gas, and water volumes from these two wells producing to this battery will be determined by using a test separator/heater treater at the proposed facility. Oil will be sold through a common Smith LACT Meter SNP50198.

ROW has been obtained, RW-NM 129519 & 129520.

Working, royalty, and overriding interest owners are not identical and have been notified of this proposal via certified mail (see attached).

APPLICATION FOR SURFACE COMMINGLING\OFF-LEASE MEASUREMENT, SALES, & STORAGE

Proposal for the Cerf 10 Fed Com 3H & 4H:

Devon Energy Production Company, LP is requesting approval for a Surface Commingling\Off-Lease Measurement of the following wells:

Well Name	Location	API #	Pool 3713	BOPD	Gravities	MCFPD	BTU

Attached is a map displays the federal leases and well locations in Section 9, T21S, R27E.

The BLM's interest in these wells are the same.

Oil & Gas metering:

The central tank battery is located at the Cerf 10 Fed 3H & Cerf 10 Fed Com 4H Battery, in Sec 9, T21S, R27E, in Eddy County, New Mexico. The production from the Cerf 10 Fed 3H & 4H will come into a common production header with isolation lines to route each wells production. The Cerf 10 Fed Com 4H will be continuously metered, while the Cerf 10 Fed 3H will be measured through the subtraction method. VRU will be allocated back to each well utilizing a percentage of each wells monthly oil production.

The Cerf 10 Fed 3H & Fed Com 4H Battery will have three oil tanks that both wells will utilize and they have a common gas Federal Measurement Point #885-33-192 on location in the northwest corner. Oil will be sold through a common Smith LACT Meter P655654332.

The production from these wells will come into a common production header with isolation lines to route each wells production. From this point, the Cerf 10 Fed Com 4H will be continuously metered. Production from the Cerf 10 Fed Com 4H flows into the inlet separator. Gas from the separator flows through the Cerf Fed Com 4H gas meter #885-49-191. Liquids flow from the inlet separator to the FWKO. Oil from the FWKO flows to the Cerf Fed Com 4H heater treater, while water flows through a turbine meter to two 500 bbl. fiberglass water tanks. Oil exiting the Cerf Fed Com 4H heater treater is measured by the Micro Motion Coriolis Meter #14373043 before entering the ULPS and finally the 500 bbl oil tanks.

Production from the Cerf 10 Fed 3H will be measured utilizing the subtraction method. Production will flow into the header and then into the inlet separator. Gas will flow out of the separator and combine with the Cerf 10 Fed Com 4H gas after the 4H gas meter (#885-49191). The combined gas stream flows to another 2 phase separator prior to the Federal Measurement Point #885-33-192. Liquids from this vent gas separator dumps to the water tanks. Oil and water from the Cerf 10 Fed 3H production stream will flow into its own heater treater. Following the heater treater, the oil will combine with the Cerf 10 Fed Com 4H oil stream (after the coriolis meter) and the combined oil stream will flow into the ULPS before the oil tanks. The water from the Cerf 10 Fed 3H heater treater is goes to the water tanks. Gas from the Cerf 10 Fed 3H heater treater also goes to the ULPS and eventually the VRUs. Gas from the VRU is measured with meter #885-00-190 prior to being combined with the other produced gas stream in the vent gas separator.

Oil production for the Cerf 10 fed com 4H will be allocated utilizing the Micro Motion Coriolis Meter #14373043, the production from the Cerf 10 Fed 3H will be allocated based on the subtraction method. Gas volumes will also be allocated based on the subtraction method for the Cerf 10 Fed 3H. The Cerf 10 Fed Com 4H gas production will be allocated back utilizing gas meter #885-49-191. Gas from the VRUs will be allocated back based on each wells monthly oil production. All meters will be calibrated on a regular basis per API, NMOCD and BLM specifications. The BLM and OCD will be notified of any future changes in the facilities.

Process and Flow Descriptions:

The flow of produced fluids is shown in detail on the enclosed facility diagram, along with a description of each vessel and map which shows the lease boundaries, communization agreement boundaries, and location of wells, facility, and gas sales meter. The proposed commingling is appropriate based on the BLM's guidance in IM 2013-152. The proposed commingling will maximize the ultimate recovery of oil and/or gas from the federal leases and will reduce environmental impacts by minimizing surface disturbance and emissions. The proposed commingling will reduce operating expenses, as well as, not adversely affect federal royalty income, production accountability, or the distribution of royalty.

Devon Energy Production Company, LP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. ROW has been obtained, RW#NM-129519 & 129520.

Working, royalty, and overriding interest owners are not identical and have been notified of this proposal via certified mail (see attached).
