**Describe Cause of Problem and Remedial Action Taken.\***

The suction bleeder line was open and the discharge valve was closed which resulted in the circulating drain pot filling and overflowing into the surrounding lined containment. The line that had been open was closed to prevent further release.

**Describe Area Affected and Cleanup Action Taken.\***

Approximately 5BBLs of oil was released from the circulating drain pot and overflowed into the surrounding lined containment. The release originated between the first produced water storage tank and the containment wall located on the northeast side of location. All fluid stayed in lined containment, the liner was checked for holes, no holes found in liner. 5BBLs oil and 5BBLs of rainwater were recovered via vacuum truck. No further action required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
