## **Conditions of Approval for Shut-In Gas Well**

## Faskin Oil & Ranch Limited El Paso Federal – 03H, API 3001521307 T21S-R26E, Sec 01, 1664FNL & 660FWL March 10, 2017

- 1) A gas well with acceptable justification may be granted shut-in status for a specified renewable time (usually one year).
- 2) Submit for this well a Lease Operating Statement (L.O.S.) for the last 12 consecutive producing months showing revenue, and operating, and maintenance expense.
- 3) A well production test, reservoir evaluation, and MIT will usually be required compliance by the Authorized Officer for renewal of shut-in status.
- 4) Submit a BLM witnessed Mechanical Integrity Test of the tubing/casing annulus after a tubing, packer or casing seal is established and within three months of shut-in status being accepted by BLM.
  - a) The minimum MIT pressure should be 500 psig for 30 minutes or 300 psig for 60 minutes, with a minimum 200 psig differential between tubing and casing pressure (at test time) but no more than 70% of casing burst pressure as described by Onshore Order 2.III.B.1.h. (The tubing or reservoir pressure may need to be reduced). Verify all annular casing vents are plumbed to surface and those valves open to the surface during this pressure test.
  - b) Document the pressure test on a one hour full rotation chart recorder (calibrated within the last 6 months) registering within 35 to 75 per cent of its full range. Greater than 10% pressure leakoff will be viewed as a failed MIT. Less than 10% pressure leakoff will be evaluated site specifically and may restrict injection approval.
  - c) Make arrangements 24 hours before the test for BLM to witness. In Eddy County 575-361-2822. If no answer, leave a voice mail or email with the API#, workover purpose, and a call back phone number
  - d) A "Best Management Practice" is to maintain the annulus full of packer fluid at atmospheric pressure. Equipment that will display on site, continuous open to the air fluid level above the casing vent is necessary to achieve this goal.
  - e) Excessive (+5 bbls/month) gain or loss of annular fluid volume requires BLM notification.
