GAS CAPTURE PLAN

RECEIVED

Date: 11-30-2016

☒ Original

Operator & OGRID No.: OXY USA INC. - 16696

☐ Amended - Reason for Amendment: \_\_\_\_\_

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomple to new zone, re-frac) activity.

*Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).*

**Well(s)/Production Facility – Name of facility**

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well Location (ULSTR)	Footages	Expected MCF/D	Flared or Vented	Comments
Patton MDP1 18 Federal #1H <u>30-015-44317</u>	Pending	Unit M / Lot 13, Sec. 7, T24S, R31E	609FSL 712FWL	1,991	0	
Patton MDP1 18 Federal #2H <u>30-015-44337</u>	Pending	Unit C / Lot 3, Sec. 18, T24S, R31E	170FNL 1898FWL	1,991	0	
Patton MDP1 18 Federal #3H <u>30-015-44333</u>	Pending	Unit C / Lot 3, Sec. 18, T24S, R31E	170FNL 1928FWL	1,991	0

**Gathering System and Pipeline Notification**

Well(s) will be connected to a production facility after flowback operations are complete, where a gas transporter system is in place. The gas produced from production facility is dedicated to Enterprise Field Services, LLC ("Enterprise") and is connected to Enterprise gathering system located in Eddy County, New Mexico. OXY USA INC. ("OXY") provides (periodically) to Enterprise a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, OXY and Enterprise have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at Enterprise Processing Plant located in Sec. 36, Twn. 24S, Rng. 30E, Eddy County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

**Flowback Strategy**

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on Enterprise system at that time. Based on current information, it is OXY's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and non-pipeline quality gas be vented and/or flared rather than sold on a temporary basis.

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- **Power Generation – On lease**
  - Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- **Compressed Natural Gas – On lease**
  - Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- **NGL Removal – On lease**
  - Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
