Devon Energy Production Co. L.P. proposes to shut off water flow behind 13 3/8" X 9 5/8" annulus.
Devon proposes to pump 250 sx CL C cement down annulus from surface and displace with 280 bbls of packer fluid.
A tracer survey was run on the well indicating fluid pumped down the annulus was going to 5000'. A temperature survey run on the well during drilling indicated a top of cement behind the 9 5/8" of 4750'.
The proposal would cover up the open hole section behind the 9 5/8" and leave cement 200' into the 9 5/8" X 13 3/8" annulus. A radioactive tracer will be added to slurry and surveyed to confirm proper cement placement.
A flow test will be performed by opening the casing valve 48 hours after completion.

11-8-05 Spotted 250 sx CL C cement with radioactive tracer across open hole section. Verified cement placement with tracer survey. Top of cement 225' into the 9 5/8" X 13 3/8" annulus.

Survey attached.
