Intent was to run integrity test on casing and repair if necessary. On 11/16/06 pressured up on annulus between tubing and casing. The annulus would not hold pressure. Unset packer and pulled tubing looking for hole. Found hole in tubing 74 joints down. 11/17/06 Replace bad joint and run back in hole and set packer. Wait on I&W to H-5 test. I&W ran test on 11/20/06. Pressured up to 500 psi, pressure dropped 200 psi in one minute. Came out of hole looking for hole in casing and found another in tubing 71 joints down. 11/21/06 RIH with new AD-1 packer and different string of tubing. Set packer at 2450. 11/22-06. I&W ran second H-5 test. Pressured up to 500psi at 10:53. No pressure drop recorded. Finished test at 11:30. See attached chart.

Accepted for record  
NMOCD

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that any pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☐, a general permit ☐ or an (attached) alternative OCD-approved plan ☐.
