13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

In keeping with the results of two Cement Bond Logs and a Temperature Survey that was requested by Mr. Fred Wright of the BLM, the 5-1/2" production casing was perforated at 810' (30' above TOC) and cemented to surface. A cement retainer was set @ 781'. A lead slurry of 50 sxs of Class C w/3% bwow Sodium Chloride and 10% bwoc Benzonite @ 11.8 ppg and 2.38 cf/sx yield was pumped. A tail slurry of 50 sxs Class C Neat was pumped @ 14.8 ppg and 1.33 cf/sx yield. Cement returns were circulated to the surface. The cement squeeze was witnessed by Mr. Terry Wilson with the BLM.

The cement retainer was drilled out at 781'; a cement retainer from an earlier attempt to circulated cement behind the 5-1/2" production string was also drilled out at 4334' as was the previously set CIBP at 4601'. 239 jts of 2-7/8" production tubing was run in hole with the Seating Nipple @ 7624'. The well was returned to production.

14. I hereby certify that the foregoing is true and correct
