13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

BEPCO, L.P. respectfully requests an extension of time to file a remedial cement plan for the subject wellbore. Completion operations for the well have been delayed due to the completion of the Big Eddy Unit Pipeline now under construction. The well has been perfered in the Morrow but cannot be tested until approximately June 1st when the pipeline is completed. At that time, BEPCO desires to test the Morrow for one month and then perforate the Atoka and test for three months. If production is adequate without further completion operations, the two zones will then be commingled and produced simultaneously.

From an engineering prospective, we feel that it would be more prudent to perforate and frac all production zones without subjecting squeezed perforation in the remedial cement zone to fracture and stimulation pressures. After the Morrow and Atoka zones are producing, BEPCO will file a remediation plan and procede to improve the integrity of the wellbore. We anticipate that the timing of that work would be around September 15th or October 1st, 2008.
