If this is a pit closure: (1) Attach a diagram of the facility showing the pit's relationship to other equipment and tanks. (2) Indicate disposal location: (check the onsite box if you are burying in place) onsite ☒ offsite ☐ If offsite, name of facility _____. (3) Attach a general description of remedial action taken including remediation start date and end date. (4) Groundwater encountered: No ☒ Yes ☐ If yes, show depth below ground surface _____ ft. and attach sample results.

(5) Attach soil sample results and a diagram of sample locations and excavations.

Additional Comments: The burial pit was excavated until a rock layer was encountered and excavation could not continue with a trackhoe. Samples were collected and submitted to a laboratory for chloride analyses. The bottom of the excavation was covered with a double-4 oz. felt liner. A 20 mil plastic liner was placed above the felt liner, and all stockpiled soil was encapsulated within the 20 mil liner, to a depth of 3' bgs. Clean soil was placed above the encapsulated material, from a depth of 3' bgs to surface.

The surface soil was contoured to grade and re-seeded with BLM #4 seed mixture.

A Remediation and Reclamation Report is submitted with this final C144, that provides all analytical documentation.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that the above-described pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☒, a general permit ☐, or an (attached) alternative OCD-approved plan ☐.
