13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally, or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Yates Petroleum Corporation plans to plugback and recompleat this well as follows: NU BOP. MIRU any safety equipment as necessary. POOH with all production equipment. Set a CIBP at 6244' with 35' cement on top. Set a CIBP at 5748' with 35' cement on top. Perforate Abo 4746'-4766'(21). Stimulate as needed. Evaluate this zone. If wet, set a CIBP at 4620' with 35' cement on top then move up to perforate and stimulate Abo 4412'-4417'(6), 4420'-4422'(3), 4458'-4464'(7), 4540'-4545'(6) and 4638'-4644'(7). If not, set a caged composite flow through frac plug and guns on wireline (if 1st set of Abo perfs are wet and we set a CIBP w/cement on top, don't set the frac plug and perforate on tubing). Spot 1000g 7-1/2% IC HCL across perfs. Set flow through frac plug at 4700' and pressure test plug.

14. I hereby certify that the foregoing is true and correct.
