## NOTICE TO OIL AND GAS FACILITIES AND OPERATORS FLARING GAS IN NEW MEXICO

(February 17, 2011)

OCD is encouraging all oil and gas facilities with flare stacks and well operators who are flaring gas to ramp up their Fire Awareness Programs this year. As of February 1st, the U.S. Drought Monitor indicated a swath of severe drought across the southern third of New Mexico. Moderate drought exists across the remainder of the southern half of New Mexico. Abnormal dryness exists across much of the remainder of the region with the exception of northwestern New Mexico. The Seasonal Drought Outlook (February 3<sup>rd</sup>) shows most of the current drought conditions persisting in all areas through April with developing drought across sections of northern/central New Mexico.

The CPC climate outlook for February indicates well below normal precipitation area-wide (0-25%) of average). Southwest Area Predictive Services (SWAPS) meteorologists generally agree with the above except for precipitation recently received in February across northern/northeastern New Mexico. Since January 1, 2011, 43 fires have burned 3,296 acres of state and private land (SFD-2/17/2011).

Open flames and gas flares should be monitored very carefully and corrective actions, i.e., mowing grass down to one to two inches around flare stacks at least a radial distance of two times (three times when a facility is unmanned) the height of the flare stack, should be taken to reduce fuel sources around ignition sources. Heightened awareness, preventive measures, and rapid response should be undertaken during posted red flag days. To monitor for red flag days, please go to: <a href="http://gacc.nifc.gov/swcc/">http://gacc.nifc.gov/swcc/</a> (go to "Predictive Services" on the Southwest Coordination Center Website).

Thank you.
