If a Watercourse was Impacted, Describe Fully.*

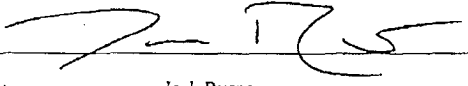

Describe Cause of Problem and Remedial Action Taken.*

A Victaulic connection ruptured causing the release. The line was re-routed and returned to service.

Describe Area Affected and Cleanup Action Taken.*

Initially 200bbbs of produced water was released from the line and we were able to recover 100bbbs with a vacuum truck. The spill measured 15' x 20' behind the battery, a second 60' x 80' behind the battery, and a 3' x 100' trail off the northwest corner of the pad. The pad will be scraped to remove contaminants. Tetra Tech will sample the spill site are to delineate any contamination from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
