U. S. GEOLOGICAL SURVEY  
ARTESIAN NEW MEXICO

This plan is submitted with the Application for permit to drill the well. This plan describes the location of the proposed well, the proposed construction activities and the necessary surface disturbance involved in drilling this well.

Item 1

The proposed well in relation of existing highways and the village of Seven Rivers is shown on the attached Topo map. The proposed location is shown in red.

Item 2

Attached is a Topo map showing the proposed location, existing roads and trails in the area and the general location of the planned access road. The proposed road will follow an existing road from the American Quasar #1 Federal well in the SE- $\frac{1}{4}$  of Section 24 in a Southwesterly direction to the Southern Union Exxon Federal #1 well. A new road will be constructed from the Exxon Federal # 1 in a Southeasterly direction approximately 2500' to proposed location. The existing road is shown in blue and the proposed construction is shown in red on attached Topo map.

Item 3

On attached Topo map, existing wells within a one mile radius are shown in blue.

Item 4

If the proposed well is completed for production, a gas production unit and a condensate tank will be erected on the well site. Condensate will be trucked off and sold. It is not known where the gas line would be constructed by the gas purchaser.

Item 5

Water for drilling will be hauled by truck.

Item 6

Caliche for surfacing the road will be obtained from an existing pit near the American Quasar #1 Federal well in Section 24, T20S, R25E.

Item 7

The location will be cleared after completion of drilling operations. All trash will be buried. The mud pits will be allowed to dry and then covered. All attempts within reason will be made to restore the general area to its former condition.

Item 8

No ancillary facilities are planned.
