If a Watercourse was Impacted, Describe Fully.\* Not Applicable

Describe Cause of Problem and Remedial Action Taken.\*  
A valve was discovered closed on the flare scrubber causing the vessels to load up and exit the flare stack. The valve was opened and the system restored to normal. The free standing fluid was recovered with a vacuum truck.

Describe Area Affected and Cleanup Action Taken.\*  
The release puddled up in an area of approximately 460 sq. ft. inside the earthen containment around the flare stack, it also misted approximately 260 sq. ft. of caliche pad and approximately 1,000 sq. ft. of pasture. Samples were collected, and based on laboratory analytical data and NMOCD approval: the contaminated soil was excavated and hauled to a state approved disposal facility and the excavation backfilled with clean soil.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
