13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Mewbourne Oil Company is requesting a 120 day extension to implement reclamation procedure. Reclamation procedure is as follows:

1- Cut trench along North &amp; South (uphill &amp; down hill sides) of pit area.

2 - Fill trench &amp; cap pit area w/1' compacted new caliche from BLM pit (no charge) as per Ernie Hawkins.

3 - Use road material from intersection to location (excluding road material near the Langley dryhole marker & pit area to keep from excavating into the old Langley pit) for top soil material. Place this material on compacted caliche. In addition to this material MOC will haul dirt from the same BLM pit as the caliche (MOC will continue the cut to the west for this material) to finish covering compacted caliche. This material will be sold to MOC at \$0.75 per yard as per Ernie Hawkins. MOC will use clean material (berms) from BLM pit for water deflection to prevent soil erosion.

4 - MOC will fertilize &amp; seed new topsoil &amp; monitor revegetation of pit area.
