BOPCO, L.P. would like to submit a Change of Plans Sundry for the 9-5/8" 2nd Intermediate cement job. The approved APD outlined a single stage cement job that will not be succesful due to lost circulation in the Capitan Reef section. A 2-stage cement job has been used in recent offset wells in the section to succesfully cement through the Capitan Reef with a DV tool and ECP.

A DV tool and external casing packer will be run on the 9-5/8" casing string at +50' below the 13-3/8" casing at 2661' and above the expected top of the Capitan Reef at +2790'. Prior to running casing, a 3-arm wireline caliper will be run to help determine ECP placement. The 2-stage cement will be comprised of the following:

1st stage - Tail - 1100 sks Class C + Additives (13.6 ppg, 1.71 yield)
2nd stage - Lead - 600 sks EconoCem HLC + Additives (12.7 ppg, 1.85 yield)
Tail - 100 sks Class C + Additives (14.8 ppg, 1.33 yield)

Cement will be circulated to surface.
