Additional data for EC transaction #242061 that would not fit on the form

32. Additional remarks, continued

- 5. Drill Out the DV tool and test the casing to 3000psi for 30 mins
- 6. Drill 6-1/8" Lateral section, install the 4.5" liner completion system, set RBP above the liner top and release the rig
- 7. Well Servicing Team to run CBL Log to confirm cement integrity
- 8. Well Servicing Team to test the casing to 7850psi for 30 mins (70% of internal yield pressure of the casing), retrieve the bridge plug and continue with completion operations

OXY USA Inc. FNR 26 Federal #2H – 30-015-41647 Amend BOP

PRESSURE CONTROL EQUIPMENT

Surface: 0 - 500' None.

Intermediate & 8-3/4" Production: <u>500' MD/TVD - 8100' MD / 7684' TVD</u> Intermediate and Production hole will be drilled using a 13-5/8" 10M three ram BOP stack with **5" DP Rams**, 5M annular preventer and a 5M Choke Manifold.

- a) All BOP's and associated equipment will be tested in accordance with Onshore Order #2 (250/5000 psi on rams for 10 minutes each and 250/3500 for 10 minutes for annular preventer, equal to 70% of working pressure) with a third party BOP testing service before drilling out the surface casing shoe. A Multibowl wellhead system will be used in this well therefore the BOPE test will cover the test requirements for the 12-1/4" Intermediate and 8-3/4" Production sections.
- b) The Surface and intermediate casings strings will be tested to 70% of its burst rating for 30 minutes. This will also test the seals of the lock down pins that hold the pack-off in place in the Multibowl wellhead system.
- c) Pipe rams will be function tested every 24 hours and blind rams will be tested each time the drill pipe is out of the hole. These functional tests will be documented on the daily driller's log. A 2" kill line and 3" choke line will be accommodated on the drilling spool below the ram-type BOP.
- d) The BOPE test will be repeated within 21 days of the original test, on the first trip, if drilling the 12-1/4" intermediate or 8-3/4" production section takes more time than planned.
- e) Other accessory BOP equipment will include a Kelly cock, floor safety valve, choke lines, and choke manifold having a 5000 psi working pressure rating and tested to 5000 psi.
- f) The Operator also requests a variance to connect the BOP choke outlet to the choke manifold using a co-flex hose manufactured by Contitech Rubber Industrial KFT. It is a 3" ID x 35' flexible hose with a 10,000 psi working pressure. It has been tested to 15,000 psi and is built to API Spec 16C. Once the flex line is installed it will be tied down with safety clamps. Certifications attached to original APD
- g) BOP & Choke manifold as per approved APD

61/8" **Production:** 8100' MD'/ 7684' TVD - 12045' MD / 7728' TVD. Production hole will be drilled using a 13-5/8" 10M three ram BOP stack with 4" **DP Rams**, 5M annular preventer and a 5M Choke Manifold.

- a) After changing pipe rams from 5" to 4" all BOP's and associated equipment will be tested in accordance with Onshore Order #2 (250/5000 psi on rams for 10 minutes each and 250/3500 for 10 minutes for annular preventer, equal to 70% of working pressure) with a third party BOP testing service before drilling out the surface casing shoe.
- b) The 7" production casing string will be tested to 3000psi for 30 minutes.
- c) As above
- d) As above
- e) As above
- f) As above
- g) As above
