OIL CONS. DIV. DIST. 3

MAY 30 2014

Desert Rose Resort, LLS DBA KOA Kampground proposes to permanently plug and abandon the Hare #1 as follows:

Set a CICR at 641' then mix and pump 35 sx (1.18 cf/sx) Class "B" or similar cement below retainer. Sting out of retainer, leaving enough cement on top of retainer so top of cement is at least 609' (50' above Kirtland top at 659'). Pull up and circulate hole and tubing clean. Pressure test casing to 500 psi. Run cement bond log from CICR to surface. Spot 2nd plug, 12 sx (14.2 cf) from 492'-392' for Ojo Alamo top at 442'. Based on bond log and pressure test results, plan on surface plug w/ NMOCD representative. Once well is P&A'd, cutoff well head & install P&A marker. Remove anchor (if any) remove any related surface equipment and clean off location.

Notify NMOCD 24 hrs
prior to beginning
operations
