ARTESIA DISTRICT

Describe Cause of Problem and Remedial Action Taken.\*  
**JUN 04 2014**  
**RECEIVED**

The valute covering had the wrong material for the plug. Replaced the failed plug with a stainless plug.

Describe Area Affected and Cleanup Action Taken.\*  
Initially approximately 15 bbls were released due to a faulty seal on the transfer pump. 11 bbls were recovered by a vacuum truck and all free fluids were recovered. The spill was contained inside the facility walls. Tetra Tech inspected site and collected samples to define spills extent. Soil that exceeded RRAL was removed and hauled away for proper disposal. Site was then brought up to surface grade with clean backfill material. Tetra Tech prepared closure report and submitted to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
