#### Describe Cause of Problem and Remedial Action Taken.\*

The flow line ruptured causing release. The well was shut in and a vacuum truck was called to the location, line repaired.

#### Describe Area Affected and Cleanup Action Taken.\*

An approximate area of 15' X 30'. The flow line was repaired; remaining oil and produced water was recovered. Impacted soils to be excavated and hauled to an NMOCD approved facility. Vertical and horizontal delineation samples will be taken and analysis ran for TPH & BTEX (chloride delineation/results in soil are for documentation). If initial analytical results for TPH & BTEX are under RRAL's, a Form C-141 Final Report will be submitted to the NMOCD requesting closure. If the analytical results are above the RRAL a work-plan will be submitted to the NMOCD. **Depth to Ground Water: >100' (approximately 200', pre the Chevron/Texaco Trend Map), Wellhead Protection Area: No, Distance to Surface Water Body: >1000', SITE RANKING IS 0. Based on impacted soils excavated/hauled, enclosed analytical data and site ranking, Yates Petroleum Corporation requests closure.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
