Describe Cause of Problem and Remedial Action Taken.* A hole had developed in a steel line going from the circulating pump to the heater treater. The steel line has been replaced.		
Describe Area Affected and Cleanup Action Taken.* Initially 15 bbls of oil were released from a steel line that had developed a hole going from the circulating pump to the heater treater. 14 bbls were recovered with a vacuum truck. The release was contained within the inside of the facility walls. Tetra Tech inspected site and collected samples to define spills extent. Soil that exceeded RRAL was removed and hauled away for proper disposal. Site was then brought up to surface grade with clean backfill material. Tetra Tech prepared closure report and submitted to NMOCD for review.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
